

Commentary on the economy and interest Rates provided by Sector Treasury Services Ltd (April 2013)

EU Sovereign Debt Crisis

The EU sovereign debt crisis was an ongoing saga during the year. However, the ECB statement in July that it would do “whatever it takes” to support struggling Eurozone countries provided a major boost in confidence that the Eurozone was (at last) beginning to get on top of its problems. This was followed by the establishment of the Outright Monetary Transactions Scheme in September. During the summer, a €100bn package of support was given to Spanish banks. The crisis over Greece blew up again as it became apparent that the first bailout package was insufficient. An eventual very protracted agreement of a second bailout for Greece in December was then followed by a second major crisis, this time over Cyprus, towards the end of the year. In addition, the Italian general election in February resulted in the new Five Star anti-austerity party gaining a 25% blocking vote; this has the potential to make Italy almost ungovernable if the grand coalition formed in April proves unable to agree on individual policies. This could then cause a second general election – but one which could yield an equally ‘unsatisfactory’ result. This result emphasises the dangers of a Eurozone approach heavily focused on imposing austerity, rather than promoting economic growth, reducing unemployment, and addressing the need to win voter support in democracies subject to periodic general elections. This weakness leaves continuing concerns that this approach has merely postponed the ultimate debt crisis, rather than provide a conclusive solution. These problems will, in turn, also affect the financial strength of many already weakened EU banks during the expected economic downturn in the EU. There are also major questions as to whether the Greek Government will be able to deliver on its promises of cuts in expenditure and increasing tax collection rates, given the hostility of much of the population.

UK Coalition Government

The UK coalition government maintained its tight fiscal policy stance against a background of warnings from two credit rating agencies that the UK could lose its AAA credit rating. Moody’s followed up this warning by actually downgrading the rating to AA+ in February 2013 and Fitch then placed their rating on negative watch, after the Budget statement in March. Key to retaining the AAA rating from Fitch and S&P will be a return to strong economic growth in order to reduce the national debt burden to a sustainable level, within a reasonable timeframe.

UK Growth

2012/13 started the first quarter with negative growth of -0.4%. This was followed by an Olympics boosted +0.9% in the next quarter, then by a return to negative growth of -0.3% in the third quarter and finally a positive figure of +0.3% in the last quarter. This weak UK growth resulted in the Monetary Policy Committee increasing quantitative easing (QE) by £50bn in July to a

Appendix A1

total of £375bn on concerns of a downturn in growth and a forecast for inflation to fall below the 2% target. QE was targeted at further gilt purchases. In the March 2013 Budget, the Office of Budget Responsibility yet again slashed its previously over optimistic growth forecasts, for both calendar years 2013 and 2014, to 0.6% and 1.8% respectively.

Inflation

UK CPI inflation has remained stubbornly high and above the 2% target, starting the year at 3.0% and still being at 2.8% in March; however, it is forecast to fall to 2% in three years time. The MPC has continued its stance of looking through temporary spikes in inflation by placing more importance on the need to promote economic growth.

Gilt Yields

Gilt yields oscillated during the year as events in the ongoing Eurozone debt crisis ebbed and flowed, causing corresponding fluctuations in safe haven flows into / out of UK gilts. This, together with a further £50bn of QE in July and widely expected further QE still to come, combined to keep PWLB rates depressed for much of the year at historically low levels.

Bank Rates

The bank rate was unchanged at 0.5% throughout the year, while expectations of when the first increase would occur were pushed back to quarter 1 2015 at the earliest.

Deposit Rates.

The Funding for Lending Scheme, announced in July, resulted in a flood of cheap credit being made available to banks and this has resulted in money market investment rates falling sharply in the second half of the year. However, perceptions of counterparty risk have improved after the ECB statement in July that it would do “whatever it takes” to support struggling Eurozone countries. This has resulted in some return of confidence to move away from only very short term investing.
